APP STORE → JOHN DEERE POWER ASSIST

Looking for information pertaining to your engine? Download the “John Deere Power Assist” App! Its free and easy to use!

By using the camera on your phone (if the barcode is still there) or enter the serial number manually the barcode Scan option, you are able to:

- View Option Codes
- View Engine Information – such as Build date
- Check ECU Level
- Identify Part Numbers
- Run Serial number
- Identify If Current software installed on ECU
- Find out If new Payload is available
- View Manuals for the engine (Operators Manual and Parts Book)

The Parts Book allows you to identify part numbers specifically for your engine.

Please Note: when you press the “Parts Book” it will redirect you to another page, you must enter “PC” in front of the numbers and the parts book will open.

“PC” = Parts Catalog

When you choose a part from the book there may be multiple choices for your engine. That is where the option codes for your engine come into effect. You may have to toggle back to the Power Assist app (which should stay running in the background) to find the option code for the particular area of the engine. Once you have the option code you can choose that code under the part your trying to identify in the parts book. When you choose the correct option code an illustration & breakdown of the engine area will appear with a list of part number’s and part description.
